Supporting Information for Section 4.2.10 Environmental Justice (for Idaho National Laboratory)

This discussion supports the identification of minority and low income populations within 50 miles of the Idaho National Laboratory (INL).

Minority and Low-Income Populations

Procedures for the determination of minority and low-income populations found in Section 4.2.10 of the Environmental Impact Statement are discussed in this section. Appendix D of the "Procedural Guidance for Preparing Environmental Assessments and Considering Environmental Issues" released by the U.S. Nuclear Regulatory Commission (NRC), Office of Nuclear Reactor Regulation, May 24, 2004, was used to identify minority and low-income populations for this Environmental Justice review.

Typically, the potential area impacted by environmental issues is within a 50-mile radius of the site (NRC 2004). TtNUS decided to determine the minority populations and low-income populations for all census block groups within 50 miles of the centroid of INL. The centroid was determined using ArcGIS® 9.1. The resulting coordinates (UTM NAD 83, Zone 12, meters) is N 4,838,048.5, E 355,904.6. A 50-mile radius was drawn from this coordinate. Block groups were used because the block group geographic area is small enough so as to not dilute a potential minority or low-income populations within the larger general population (NRC 2004). U.S. Census Bureau Summary File 1 (USCB 2000a) containing race data and Summary File 3 containing low-income household poverty data (USCB 2000b) were obtained for all block groups in Idaho and Montana. For each minority category (Black or African American, American Indian or Alaskan Native, Asian, Native Hawaiian or Other Pacific Islander, Other Races, and Two or More Races), the percentage of the total population was calculated for each block group. The Aggregate category was also analyzed. The Aggregate of the minorities represents the total population of the minority races (Black or African American, American Indian or Alaskan Native, Asian, Native Hawaiian or Other Pacific Islander, Other Race, and Two or More Races). The Hispanic Ethnicity category is NOT included in the aggregate of minorities because the U. S Census Bureau treats race and Hispanic origin (ethnicity) as two separate and distinct concepts. People who are Hispanic may be of any race. People in each race group may be either Hispanic or Not Hispanic. Each person has two attributes, their race (or races) and whether or not they are Hispanic. Because each person is counted in a race category and in either the Hispanic or not Hispanic category, including the Hispanic ethnicity in the "aggregate race" category would double count a number of individuals. As such, the race categories and the Hispanic Ethnicity categories are considered separately. The percentage of low-income households was also calculated for each block group.

The minority demographic data and low-income data were then attributed to block group spatial data in ArcGIS® 9.1 to become a shapefile coverage containing demographic and low-income data for every block group. This allowed the demographic and low-income data to be queried spatially and by attribute.

In order to identify whether a minority or low-income population exists, an area larger than and that encompasses the entire area of potential impact must be identified for comparative analysis (NRC 2004). This area is called a geographic area. TtNUS defines the geographic area to be the states of Idaho and Montana (depending on which state the block group falls into).

A minority population is considered to be present if: 1) the minority population in the census block group exceeds 50 percent or 2) the minority population percentage of the block group is significantly greater (typically at least 20 percentage points) than the minority population percentage in the geographic area (NRC 2004). A low-income population is considered to be

present if: 1) the low-income population in the census block group exceeds 50 percent or 2) the percentage of households below the poverty level in an environmental impact area is significantly greater (typically at least 20 percentage points) than the low-income population percentage in the geographic area (NRC 2004). State percentages for race and low income were obtained from the USCB (USCB 2000c, 2000d). Queries were performed on the block groups within 50 miles of INL. Any block group falling wholly or partially within the 50-mile radius was identified if that block group contained a "minority population."

Table 1 presents minority and low-income data for all block groups within 50 miles of INL. For each minority category, Table 1 identifies for each block group, whether the minority or low-income percentage exceeds the state percentage by at least 20%. The state percentages are less than 30% in all cases, and therefore the "20% greater than the state criteria" captures all minority or low-income populations. Table 2 presents a summary, by county, of block groups containing significant minority or low-income populations for the "20% greater than the state percentage" and the "greater than 50%" categories. A total of 137 block groups fall within 50 miles of INL (Table 2). Minority populations exist within 50 miles of the INL site for the American Indian or Alaskan Native, Some Other Race, Aggregate of Races, Hispanic Ethnicity, and Low-Income categories. Figures 4.2.10-1 through 4.2.10-5 (from Section 4.2.10 of the EIS) are shown below to identify locations of the minority and low-income block groups.

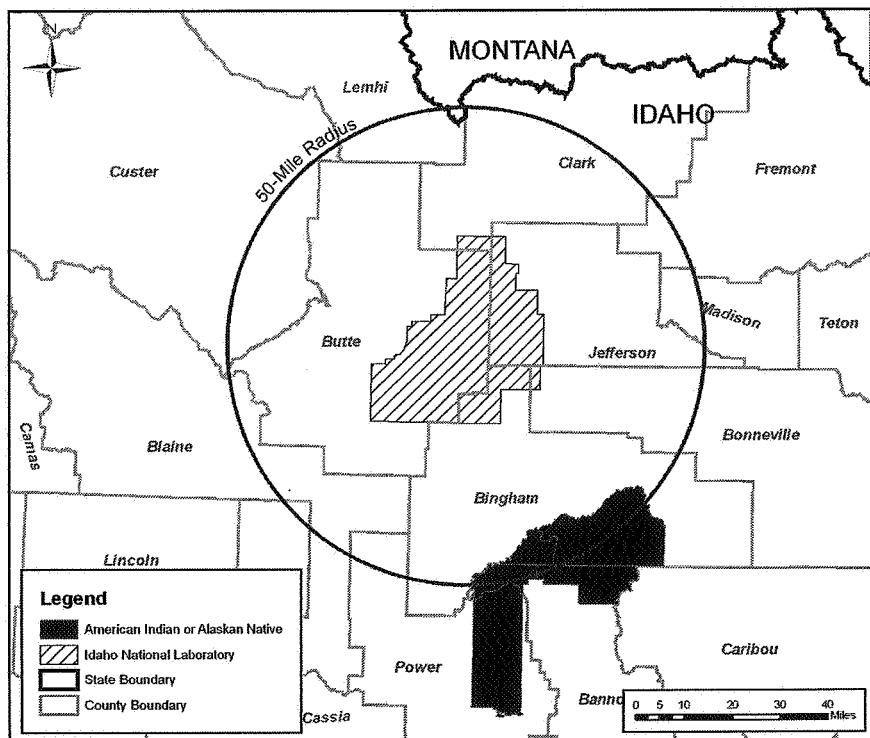

Figure 4.2.10-1. American Indian or Alaskan Native Minority Population.
